</table>
<p><h2>Drug Uses</h2></p>
<p>Acomplia is used complementary to diet and exercise to treat obese or overweight patients who suffer
from Type 2 diabetes and abnormal levels of fat in the blood. It can also prevent the risk of cardiovascular
disease. Patients with large waist circumference (102 cm in men and 88 cm in women) will mostly benefit
from taking the drug.</p>
<p><h2>How to use</h2></p>
<p>The usual dose is one 20 mg tablet to be taken once daily in the morning before breakfast. Swallow the
tablet whole. </p>
<p><h2>Drug Class and Mechanism</h2></p>
<p>Acomplia works on the CB- 1 receptors which are present throughout the body. Acomplia provides

```

blocking out these receptors which in turn works on intake of food in an individual and curbs his appetite. Weight loss starts taking place as the food intake of an individual is decreased to quite an extent. It acts on the peripheral organs which play a very important part in lipid and glucose metabolism, including the liver, adipose tissue muscles and the gastrointestinal tract. </p>

<p><h2>Missed Dose</h2></p>

<p>Take the missed dose as soon as you remember it. However, if it is almost time for the next dose, skip the missed dose and continue your regular dosing schedule. Do not take a double dose to make up for a missed one.</p>

<p><h2>Warnings/Precautions</h2></p>

<p>It is advisable to consult a doctor before taking Acomplia and adhere to the prescribed dosage to attain the expected results. Acomplia should not be taken by pregnant woman since it may cause birth defects in an unborn baby. Acomplia should not also be used by lactating mothers. Though not clinically proved, there is possibility that this diet pill may be passed into breast milk. Acomplia is metabolized by the liver, so it is recommended that patients with moderate hepatic impairment should consult their healthcare provider before using the drug.</p>

<p><h2>Possible Side Effects</h2></p>

<p>As your body adjusts to the Acomplia Drug, you may experience some of the reported side effects like anxiety, disorientation, insomnia, nausea, headache, hallucinations, hypertension, heart and kidney damage, palpitations, heart attack, strokes, psychosis, fatigue and hyperphagia (excessive eating beyond normal feeling of hunger), gastrointestinal discomfort and dizziness.</p>
